

POST-INSTALLATION SIGNATURE SERVICE SAFETY INSPECTION

When Luckydog Recreation is on the job, **safety is our priority**. The time to think about safety is before an incident happens. We are always committed to a safe and secure playground installation.

Here is what you can expect from our installation crews, **first and foremost**:

- We always have at least (1) Certified Playground Safety Inspector (CPSI) on your job site at all times.
- All CPSIs receive rigorous on-the-job training to keep their work zones safe.
- We communicate with your site superintendent before, during, and after playground construction.
- All Luckydog Recreation team members wear safety gear and dress appropriately in work zones with easily identifiable high-visibility shirts containing our Luckydog emblem.
- We keep the work zone clean and free of debris.
- Heavy machinery is used judiciously and is blocked from public access when possible.
- When a public restroom is unavailable, Luckydog team members use a company-supplied portable toilet, so they don't need to access the school or other private property.
- Luckydog uses orange safety fencing or chain link panels around the work area.
- Our CPSI always performs an inspection upon completion to ensure compliance.

Next, we help protect your investment with Luckydog's Construction Warranty. We warrant the playground installed **per the manufacturer's specifications** for one year from the installation date. Anytime, for any reason during that first year, you call, and **Luckydog is there**.

Then, Luckydog performs a **Post-Installation Signature Service Safety Inspection** to ensure your playground is safe and secure months after the installation timeframe. We will send you a full report on the health of your structure(s).

Here's how it works: Within the first year of your playground's life, Luckydog comes back to the site and conducts a **full inspection**, which includes:

- Tightening all the nuts and bolts.
- Check for any installation warranty issues and remedy them onsite.
- Checking for entanglements, protrusions, and other safety hazards.
- Check the depth of loose surfacing to ensure it is enough to meet ASTM standards.
- Looking to see if ADA access from the playground's perimeter is usable.
- Evaluating the site for anything else we want to bring to your attention about safety or compliance.

Lastly, we encourage you always to include a first-year safety inspection requirement in your Specifications and all your Bid Documents. This service should be an expectation for anyone who installs your structures.

This service is exclusive to all Luckydog customers purchasing a playground structure, and options may vary by brand. Call your **Luckydog Recreation Creative Play Designer for more information.*
