Warranty is good for the full life of the contract. Nothing if pro-rated. This means you get the full dollar value of every warranty claim for the full life of the warranty. Powder Coating is the strongest most durable powder-coating in the entire industry; 11 mils thick while industry standard is 4-5mils. Steel Tubing - 12 Gage steel tubing is thicker in diameter than the industry standard and thicker than 14 Gauge steel tubing. Clamps - The revolutionary King Clamp™ system eliminate "clamp conflict" as well as saves money. Up to 4 components may be added every clamp installed. Plastics - PlayCraft™ uses color-compounded resins prior to roto-mold to resist UV penetration and ensure lasting color for life-long vibrant color. Post Caps - factory sealed and riveted. Eliminates installer error & ensures that water or corrosion will not occur at this point contact. Play Tuff™ Coating Deck Coating is 100" to 120" mils thick.
